

Community Labour Market Report

By Amandine Martel & José-Karl Noiseux

FORT WILLIAM FIRST NATION

The Community Labour Market Report series provides local labour market indicators to assist community leaders and organizations in the decision-making process. The goal of this report is to provide community actors with a better understanding of what is happening in their community. It does not attempt to explain the reasons behind the trends, spikes or troughs in the provided data. This information is intended as a starting point for an evidence-based conversation by the community about why certain changes are occurring. This report is a first step. It is now up to you, the reader, and your fellow community members to explore and address the challenges and opportunities your community is experiencing. This report examines current labour demand and supply data from Fort William First Nation, Ontario, and analyzes how each data set aligns with the other.

01. Employers

Central to local labour market planning is an understanding of the characteristics of area employers, such as their numbers, size, and the industries they represent. Changes in any of these factors over time affect employment levels and opportunities within a local labour market.

In December 2016, 65.7 percent of businesses in Fort William First Nation had fewer than five employees (Table 2). By comparison, 87 percent of Ontario businesses had fewer than five employees at that time (Statistics Canada, 2016). Although the community had only recorded a growth of five employers since December 2015, there were changes in most of the business size categories (Table 2).

The five industries with the largest number of employers in Fort William First Nation were professional, scientific and technical services (12.9 percent); securities, commodity contracts, and other financial investment and related activities (7.1 percent); religious, grant-making, civic, and professional and

similar organizations (7.1 percent); specialty trade contractors (5.7 percent); and Indigenous public administration (5.7 percent - Table 1).

Three of these industries accounted for a greater proportion of total employment in the community when compared to employment in both the Thunder Bay District and Ontario. For example, only 4.4 percent of employers in the District and 1.4 percent of provincial employers were in the securities, commodity contracts, and other financial investment and related activities sector, compared with 7.1 percent in the community. Meanwhile, 7.1 percent of community employers fell into the religious, grant-making, civic, and professional and similar organizations sector, compared to 2.9 percent in the District and 2.7 percent in the province. Finally, Indigenous public administration provided more employment in the community (5.7 percent) than in the District (0.2 percent) or the province (0.04 percent – Table 1).

TABLE 1	EMPLOYERS BY INDUSTRY AND AS A PERCENTAGE OF TOTAL NUMBER OF EMPLOYERS, DECEMBER 2016	Total	Fort William First Nation (% of Total Number of Employers)	Thunder Bay District (% of Total Number of Employers)	Ontario (% of Total Number of Employers)

¹ Businesses with zero employees are self-employed entrepreneurs who do not have any employees on their payroll

² At the community level, the Canadian Business Counts data can be inconsistent due to concordance issues in geographical boundaries. Business data are collected according to postal codes; however, the data are aggregated and displayed according to Census Subdivision (CSD) boundaries. The postal code and CSD boundaries do not perfectly match and this can cause misreporting of data, especially when two communities are small, rural, and close to one another. Where Northern Policy Institute becomes aware of such issues, we make every effort to correct them at the earliest opportunity by working directly with Statistics Canada and locally affected communities.

02. Employment by Industry

Employment by industry data³ describe the type of business conducted by a person's employer. The industrial structure of an area—and, more specifically, shifts in industrial structure—can have significant consequences for the local labour market, such as the types of jobs available, their respective salaries, and the type of education and skills these jobs require.

It is important to note that, in Table 3, there is a difference between the sum of employees listed in each industry and the total employment in all industries. This difference occurs because of random rounding, a process used by Statistics Canada to protect the confidentiality of respondents.

Nonetheless, it is possible to say that in Fort William First Nation, in 2011, the three largest sources of employment by industry were public administration (21.5 percent), retail trade (15.4 percent), and health care and social assistance (10.8 percent - Table 3).

Interestingly, public administration represents a **significantly larger** proportion of total employment in the community than in either the Thunder Bay District (10.3 percent) or the province (7 percent).

However, given Fort William First Nation's close proximity to Thunder Bay, it is possible that these jobs are located within the city of Thunder Bay and may not reflect the industrial structure of the community.

3 TABLE Fort William EMPLOYMENT BY INDUSTRY, Fort William Thunder Bay Ontario First Nation First Nation District AND AS A PERCENTAGE OF TOTAL, 2011 (% of Total) (% of Total) (#) (% of Total) 21.5 10.3 91 Retail trade 15.4 11.8 11.1 44-45 10.8 15.9 62 Health care & social assistance 10.6 7.7 2.0 25 2.0 Arts, entertainment & recreation 71 7.7 6.1 6.1 Accommodation & food services 6.2 7.2 6.0 72 15 4.6 5.3 10.4 Manufacturing 4.6 Educational services 15 9.1 7.5 61 4.6 4.5 Other services (except public administration) 4.4 81 10 1.5 2.0 53 Real estate & rental & leasing 3.1 Administrative & support, waste management 3.1 29 4.4 & remediation services 11 Agriculture, forestry, fishing & hunting 2.0 1.5 10 0.0 21 Mining & oil & gas extraction 2.7 0.4 22 Utilities 0 1.2 0.9 0.0 41 Wholesale trade 2.7 4.6 48-49 Transportation & warehousing 0 5.5 4.7 0.0 Information & cultural industries 1.9 2.7 52 Finance & insurance 2.7 5.6 0.0 54 Professional, scientific & technical services 4.8 7.7 55 Management of companies & enterprises 0 0.0 0.1

All Industries

³ Data from Statistics Canada, such as the census or the National Household Survey (NHS), are used throughout this report. This data source has limitations. To ensure confidentiality of individual respondent identity and characteristics. Statistics Canada National Household Survey (NHS) data are subject to non-disclosure rules. All estimates in NHS tabulations are subjected to a process called random rounding, which transforms all raw estimates to random rounded estimates. This reduces the possibility of identifying individuals within the tabulations. All estimates greater than 10 are rounded to base 5. Estimates less than 10 are rounded to base 10. The total value of summed or grouped data may not match the individual values. Similarly, percentages, which Statistics Canada calculates on rounded data, may not necessarily add up to 100 percent. Statistics Canada adjusts figures retroactively. Author's calculations are based on data available at the time of publication and are therefore subject to change.

An 'X' indicates that the data was suppressed for confidentiality reasons. The Labour Force Survey suppresses data when an estimate is below 1,500 for Ontario, its Economic Regions or Census Metropolitan Areas.

03. Employment by Occupation

Employment by occupation data describe the type of work an employee does on the job. While growing industries need additional workers, the demand for specific occupations is a function of the work that needs to be done. Both the changing marketplace and the advance of technology after the demand for occupations, with some growing strongly and others in decline. These changes have an impact on the types of jobs available, their respective salaries, and the type of education and skills required. Indeed, an increase in entry-level occupations may have a different impact on the community than growth in senior-level occupations.

Although the data must be interpreted with caution, it is possible to say that, in 2011, sales and service occupations

(29.2 percent), trades, transport and equipment operators and related occupations (20.0 percent), and business, finance and administration occupations (13.8 percent) were the three largest sources of employment in Fort William First Nation (Table 5).

In Thunder Bay CMA, employment in trades, transport and equipment operators and related occupations remained stable between 2014 and 2016, while employment in sales and service occupations and in business, finance and administration occupations declined by 6.6 percent and 20.8 percent, respectively (Table 6).

...in 2011, sales and service occupations represented **29.2 percent** of total employment...

An 'X' indicates that the data were suppressed for confidentiality reasons. The Labour Force Survey suppresses data when an estimate is below 1,500 for Ontario, its Economic Regions, or Census Metropolitan Areas (CMA).

04. Local Knowledge

This section features a summary of all jobs posted online in Fort William First Nation.⁴ Although this source of data has its limitations, it does provide a general idea of the vacancies and job opportunities in the community at a given time to complement the employment data presented previously.

⁴ Vicinityjobs.ca gathers and tallies job ads posted on diverse websites, such as jobbank.ca, indeed.ca, and monster.ca. The system then strives to remove duplicates, and to classify job ads into occupational categories.

The job advertised was for a full-time retail sales supervisor.

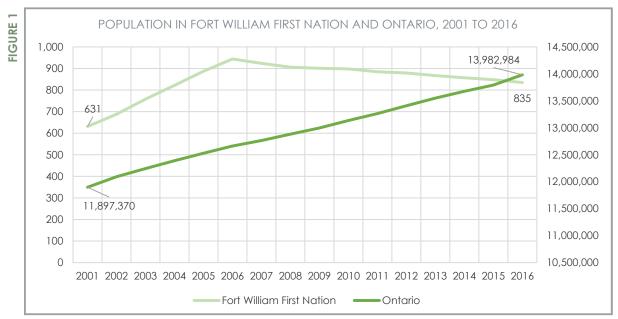

The fact that only one job was posted online does not mean that there were no other job opportunities in Fort William First Nation during this time. It may be that the online job boards monitored are not the ones used by employers, or that opportunities are communicated through different means, such as a physical job board or through word of mouth.

05. Population & Demographics

Population growth and composition are important drivers of labour market supply—the potential workers. These factors are also key components of the demand for some categories of workers (e.g., education, health care).

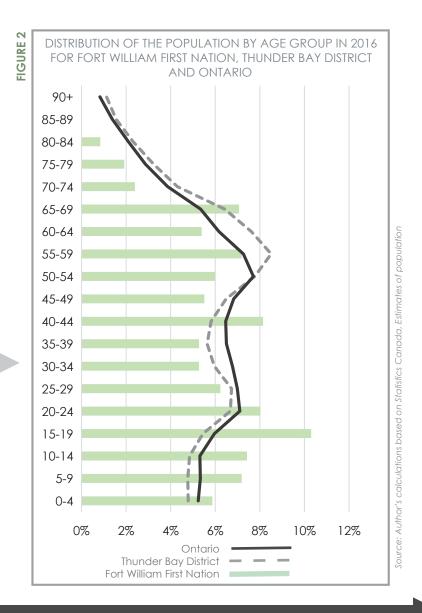

From 2001 to 2016, the population of Fort William First Nation grew by 32.3 percent while the province's population grew by 17.5 percent over the same period (Figure 1). This change in the community's population began with a 49.6 percent increase from 2001 to 2006, which was followed by an 11.5 percent decline from 2006 to 2016.

Source: Statistics Canada, Estimates of population

The age distribution of the community's population differs from that of the Thunder Bay District and Ontario. The proportion of residents under age 24 is higher in Fort William First Nation than in Ontario and the Thunder Bay District (Figure 2) while the proportion of community residents over the age of 60 is lower. Therefore, the community's population is younger than that of the District or the province.

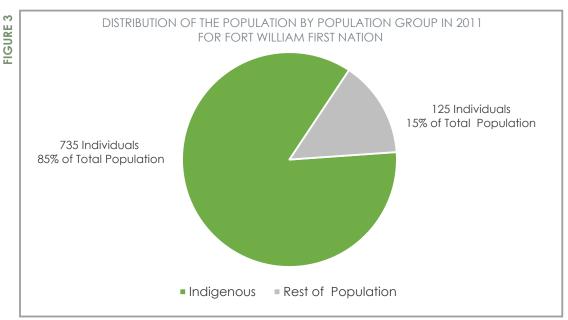

1,390
total population living off-reserve

March 2017

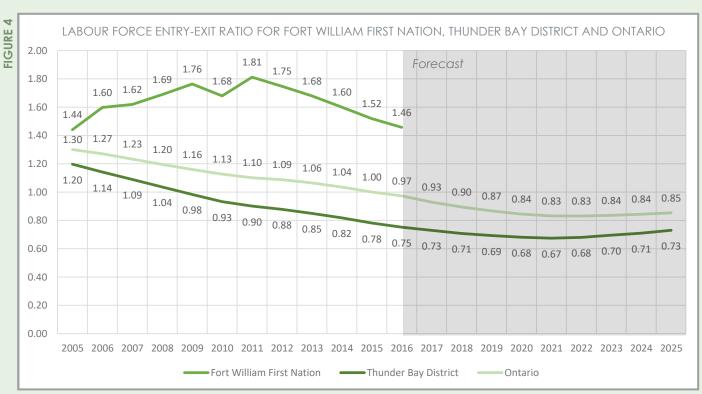

Source: Indigenous and Northern Affairs Canada.

According to census data from 2011, 85 percent of the population in Fort William First Nation was Indigenous. It is important to note that individuals self-declare Indigenous identity when completing the census. Therefore, it is possible that the remaining 15 percent of the population are of Indigenous identity but chose not to declare it.

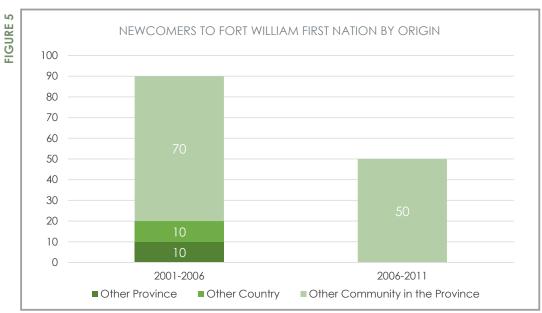

Source: Author's calculations based on Statistics Canada, National Household Survey, 2011

The labour force entry-exit ratio reflects the number of workers ready to enter the workforce (i.e., ages 15 to 24) and replace those who are approaching retirement age (i.e., ages 55 to 64 – Figure 4). In Fort William First Nation, the ratio has gone through multiple fluctuations since 2005, but consistently remained above one. This means that, for the last 12 years, there have been more people in the community entering the working-age cohort than people reaching retirement age.

Source: Author's calculations based on Statistics Canada estimation of population and Ontario Ministry of Finance forecasts, spring 2016 population projections update, for the forecast

Migration patterns can influence the population changes in an area. An area's migration patterns can also reflect, and are dependent on, among other things, employment opportunities, quality of life, and the services available to community members.

Sources: Statistics Canada, Census, 2006, and National Household Survey, 2011

The number of newcomers to Fort William First Nation was lower between 2006 and 2011 than in the previous five-year period (Figure 5). The majority originated from another community in the province. However, it is difficult to draw conclusions regarding the impact of immigration on overall population growth as community-level data on emigration is not available.

For the Thunder Bay District, the number of emigrants exceeded immigrants, resulting in negative net migration, which applies a downward pressure on population growth (Figure 6). When looking at the districts of origin and destination (Tables 8 and 9), it is interesting to note the many exchanges that occur between the Thunder Bay District and districts west of Thunder Bay, such as Kenora or Rainy River, or even districts in Alberta and Manitoba.

07. Education, Literacy, Skills, and Training

Employers often require education or experience to fill positions. Therefore, educational attainment and experience can be either a source of employment growth or a constraint if the skills available in the community do not match the local employment opportunities.

In 2011, 27.1 percent of working-age residents did not have a secondary or post-secondary certification in Fort William First Nation, compared to 28.7 percent five years prior (Figure 7).⁵ That contrasts sharply with data from the Thunder Bay District (13.8 percent) and the province (11 percent). This may pose a challenge in the future as more jobs will require post-secondary education (Moazzami, 2015).

As for Fort William First Nation's Indigenous population, 24.3 percent had no secondary or post-secondary certification in 2011, compared to 30.1 percent in the District and 22.4 percent at the provincial level (Figure 8). However, the community's Indigenous population had a higher percentage of apprenticeships and college degrees (Figure 8).

5 The detailed definition of the qualifications included in each education category can be found at http://www12.statcan.gc.ca/nhs-enm/2011/ref/dict/pop038-eng.cfm
For example, the category 'Apprenticeship or Trades Certificate or Diploma' includes registered apprenticeship certificates and the Journeyperson's certificate. It also includes other trades certificates or diplomas, such as pre-employment or vocational certificates, and diplomas and brief trade programs completed at community colleges, institutes of technology, vocational centres, and similar institutions.

ALIGNMENT 💢

08. Labour Force Participation

Participation, employment, and unemployment rates reflect whether an individual is willing and able to find employment, and whether an employer is able and willing to hire them. All the previous indicators, and more, have an influence on a worker's ability to find a job and an employer's ability to find an employee.

It is important to note that the data provided

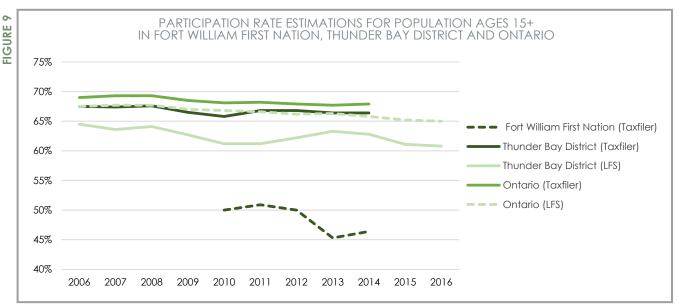

here are collected through tax reports and may not capture the informal labour market in the community, thus providing an incomplete picture of Fort William First Nation's economy.

Between 2010 and 2014, the participation rate in Fort William First Nation fell from 50.0 percent to 46.4 percent (Figure 9). During that same period, both the percentage of the community's labour force declaring employment income and Employment Insurance decreased (Figures 11 and 13).

As for the Indigenous population in Fort William First Nation, the rate of participation was 50.0 percent in 2011 compared to 56.0

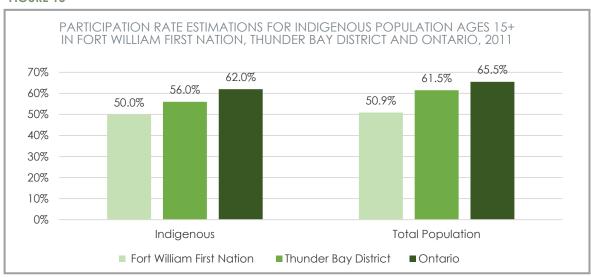

percent in the District and 62.0 percent in the province (Figure 10). The community's Indigenous employment rate (42.0

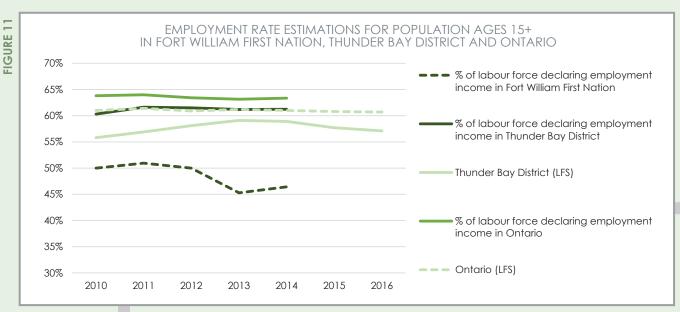

percent) was lower than that of both the Thunder Bay District and Ontario (45.0 percent and 53.0 percent respectively - Figure 12). The unemployment rate (16.0 percent) was slightly higher for this demographic than that of the province (14.0 percent) but lower than that of the District (20.0 percent - Figure 14).

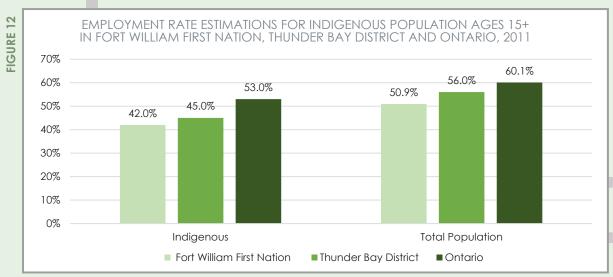

Sources: Taxfiler, participation rate calculated as the number of people receiving labour income in the total population over the age of 15; Labour Force Survey (LFS) two-year average estimates, participation rate calculated as the number of civilian, non-institutionalized persons age 15 or over who are employed or unemployed in the total population.

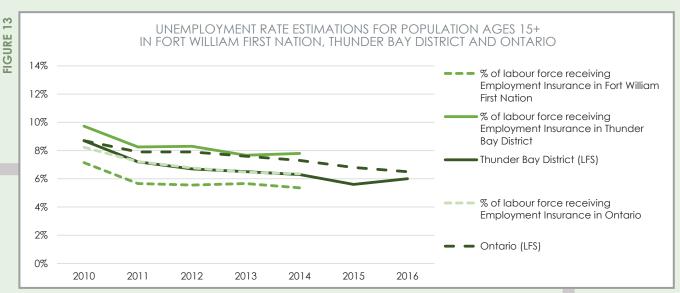

FIGURE 10

Wages—or the hourly rate an employee is compensated for their work—can have an impact on the capacity to attract candidates and to fill positions. However, if an area offers wages inferior to the rest of the province, it can be perceived as a competitive advantage and attract employers.

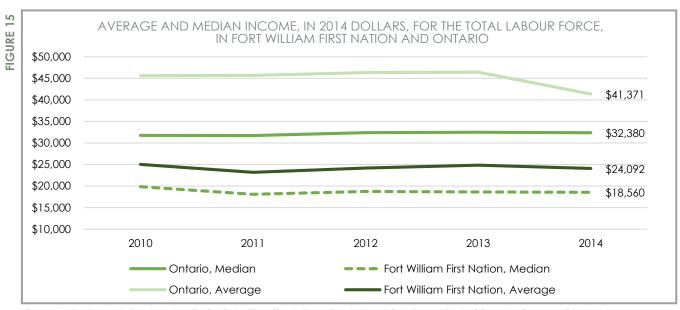

⁶For a more detailed analysis of salary comparison in the north, please see Sundmark, J. (2016). "Average salary comparison" [blog] Available at: northernpolicy.ca

10. Income

Average and median income indicate how well-off an area and its inhabitants are compared to others. Sources of income also provide information about how much of the community's income comes from the labour market and how much comes from other sources. As such, it can be an indication about the prevalence of employment and the sustainability of the community.

Source: Author's calculations based on Taxfiler Fort William First Nation "city total," and Ontario, and Bank of Canada, Consumer Price Index

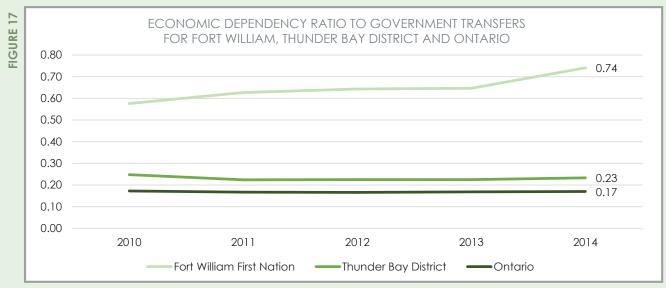

Average income depends on multiple factors, such as the type of jobs available (part-time or full-time) and/or the dominant industry in a community. Between 2010 and 2014, the average and median incomes in Fort William were approximately half that of provincial levels (Figure 15).

Furthermore, the economic dependency ratio—the amount of government transfers received compared to the amount of income earned through employment—is higher in Fort William First Nation than in both the District of Thunder Bay and the province (Figure 17). The community is thus more dependent on government transfers. In addition, the economic dependency ratio in Fort William First Nation increased from 0.58 in 2010 to 0.74 in 2014.

In 2014, the three main sources of government transfers were social assistance (12.7 percent of total income), the Canada Child Tax Benefit (7.2 percent) and Old Age Security payments (5.2 percent - Table 11). The large percentage of Canada Child Tax Benefit transfers received by Fort William First Nation can be linked to the significant percentage of children in the community (Figure 2).

FORT WILLIAM FIRST NATION

CONCLUSION

Lack of data make it difficult to provide a full picture of Fort William First Nation, and it is possible there is significant traditional and non-traditional economic activity unrepresented in the data provided in this report. However, available data seem to indicate that the community's younger population is an advantage given the region's aging demographic. Furthermore, the community is proximate to the larger economic centre of the City of Thunder Bay, which may provide opportunities for its growing workforce. The ability of the community to tap into the economy of the broader region will depend on the match between the skills of community members and requirements of the job market.

NOTE TO READERS: Moving forward, the Community Labour Market Report Series will be replaced by Community Accounts. This online portal, no.communityaccounts.ca, will provide reliable information on key economic and social indicators, broken down to the community, regional, provincial and national levels over census years 2001, 2006, 2011 and 2016. Community Accounts will be publically available to allow anyone to access data for their community in tables, charts and other formats.

About the Local Employment Planning Council (LEPC):

LEPC in Thunder Bay is a pilot project led by the North Superior Workforce Planning Board (NSWPB) with the support of Northern Policy Institute (NPI) as data and research partner. The LEPC uses community consultation, research, and evidence-based practices to spur innovation in workforce development in our region.

About North Superior Workforce Planning Board (NSWPB):

The North Superior Workforce Planning Board (NSWPB) is one of twenty-six Workforce Planning zones across Ontario, mandated through the Ministry of Advanced Education and Skills Development to identify, assess and prioritize the skills and knowledge needs of community, employers and individual participants/learners in the local labour market through a collaborative, local labour market planning process.

About Northern Policy Institute (NPI):

Northern Policy Institute is Northern Ontario's independent think tank. We perform research, collect and disseminate evidence, and identify policy opportunities to support the growth of sustainable Northern communities. Our operations are located in Thunder Bay, Sault Ste. Marie, and Sudbury. We seek to enhance Northern Ontario's capacity to take the lead position on socio-economic policy that impacts Northern Ontario, Ontario, and Canada as a whole.

This report was made possible in part through the support of the Northern Ontario Heritage Fund Corporation, the Province of Ontario and the Government of Canada. We greatly appreciate their generous support but emphasize the following: the views expressed in this report are those of the authors and do not necessarily reflect the opinions of the Institute, the Planning Board, our Directors, supporters, donors, partners, the Government of Canada, or the Government of Ontario. Quotation with appropriate credit is permissible.
